# The Open Innovation Platform of Regione Lombardia

[www.openinnovation.regione.lombardia.it](http://www.openinnovation.regione.lombardia.it)

Angelo Gatto, Finlombarda s.p.a.

80 million people, 7 countries, 48 regions,  
mountains and plains addressing together  
common challenges and opportunities

[angelo.gatto@finlombarda.it](mailto:angelo.gatto@finlombarda.it)

This project is co-financed by the European Union via Interreg Alpine Space

# Open Innovation 2.0

"Government, industry, academia and civil society work together to co-create the future and drive structural changes far beyond the scope of what any one organization or person could do alone."

*EU, DG Connect*

common challenges and opportunities

# The Open Innovation Platform

A **collaborative** platform built around the **RRI** (Responsible Research and Innovation) paradigm. Launched in 2015, it gathers today over **9000 professionals** and concerned **citizens**

80 million people, 7 countries, 48 regions;  
mountains and plains addressing together  
common challenges and opportunities

## The Open Innovation Platform

The platform is powered by "Open 2.0", a software framework released under a **free open source** license (GPL3) to promote collaboration and interoperability with other regions / initiatives (**multilingual!**)

80 million people, 7 countries, 48 regions;  
mountains and plains addressing together  
common challenges and opportunities

# The Open Innovation Platform today

**+9000**  
Participants

**+4400**  
News & discussion  
threads launched

**11**  
Public  
consultations  
launched

**+2200**  
Organisations  
(quadruple helix)

**+600**  
Expressions of interest  
in project ideas

80 million people, 7 countries, 48 regions;  
mountains and plains addressing together  
common challenges and opportunities

80 million people, 7 countries, 48 regions,  
mountains and plains addressing together  
common challenges and opportunities

## Focus on: Competence Mapping

A set of “**plug in**” to map competencies, experiences and networks of **individuals** and **organizations** in the R+I ecosystem, built on the quadruple helix paradigm and S3 priorities

Over 9.000  
individuals  
and 2.200  
organisations

74% industry  
15% research/universities  
8% government  
3% civil society

Profiles of people, organizations, projects, and results are **interconnected**

80 million people, 7 countries, 48 regions,  
mountains and plains addressing together  
common challenges and opportunities

common challenges and opportunities

## Focus on: Projects and Results

A dedicated “plug in” to map research and innovation **projects** and **results** of interest for the regional innovation ecosystem, to accelerate their dissemination and exploitation

Over 200 programmes,  
projects and results  
already mapped

Programme managers (government and private) are encouraged to use the platform

## Artificial Intelligence Engine Development Technology

IN BRIEF

DETAILED DESCRIPTION

PARTNER EEN

### Artificial Intelligence Engine Development Technology

Proposal reference: TRKR20181107003

[REQUEST MORE INFO](#)

A Korean company specializing in online video communication solution, is introducing overseas illegal spam phone blocking service through deep learning and is currently supplementing existing solutions. The technology that the company desires to develop is about Artificial Intelligence Engine Development Technology. The type of partnership would be based on both cooperative research and licensing agreement and also a Commercial agreement with technical assistance

The Korean company specializing in online video communication solution, they are introducing overseas illegal spam phone blocking service through deep learning and are currently supplementing existing solutions. They are looking for the Artificial Intelligence Engine Development Technology. The product is expected to have the following characteristics: -Development of communication network quality management engine applying artificial intelligence technology based on history and statistical data collected through real-time analysis of protocol/media of communication network - Design and development of optimal learning module using various learning methods - Development of input data modeling and preprocessing module suitable for designed learning module - Design and development of re-learning module of cases collected after application of actual operation network -Technology capable of automatic synchronization of illegal spam information through deep learning method -Self-blocking technology through synchronized illegal spam information -Hope to solve the security problem that is weak to communication link by converging with video communication solution. The type of partnership would be based on both cooperative research and licensing agreement and also a Commercial agreement with technical assistance
